Rainer Staudte informed me that Mario Garcia corrected Baystanov's study in 2012 (Estudios Artisticos de Ajedrez, 2012-01-26). Mario's correction is identical to mine (in **beatochess-15**): the latter is therefore obsolete.

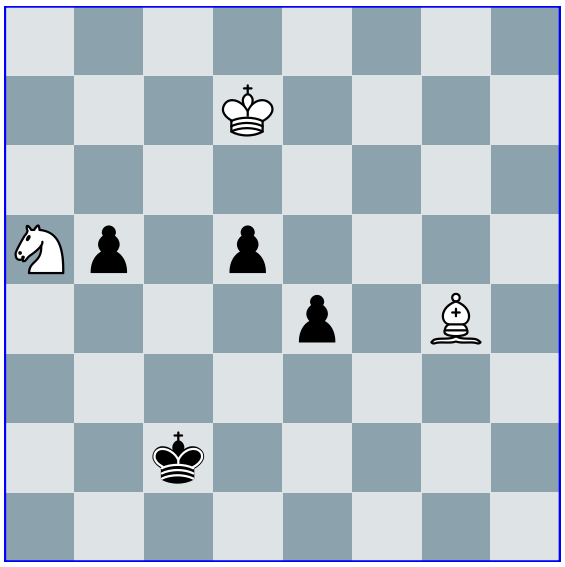

Here are the original and correction as given in Harold's database. Rainer also provided the link to the correction in **yacpdb**: (https://www.yacpdb.org/#286729)

The knight has moved back to a8 exactly on the same path it took to a1 in the first place! **1-0**.

> Steffen Nielsen: "A wonderful story, previously unknown in studies. A knight travels from one corner to another and then returns. According to the CQL scripts provided to me by Lewis Stiller, there is no prior example of such a return trip from corner to corner and back in HHDBVII. Not only that: in the tournament-winning study, the knight returns along the very same route—a long switchback! Of course, in a dream world, the journey would be completed in ten moves (a composing project for the 22nd century). Here, it takes twelve moves, involving only two captures (2. Nxa6 and 7. Nxa1) and two moves elsewhere (2. dxe4 and 3. Bxd3).
> It must be said that the idea of returning to the corner to preserve a pawn on g6/b6 (even via h6/a6) is known from numerous studies. The first example is by Berger (1923, Kagan's Neueste Schachnachrichten, HHDBVII #93474), and the most recent by Neuenschwander (2025, Ceskoslovensky Sach, HHDBVII #290). The most significant anticipation is Yochanan Afek's miniature (Hornecker MT 2024, HHDBVII #1031), in which a White knight travels from h8 to c4 and back, albeit using two different routes.
> Task studies are often ugly and forced in nature, but here we have a rare combination of ambitious ideas and pleasing play."

Volker Hergert: "Another fine example of a miniature from the Logical School. In the opening position, the aim is to advance the correct one of the two connected passed pawns. Once again, the answer requires far-sightedness. The subtle difference lies in whether the rook is directed to b2 or a2, meaning that 8.Kc1 represents a tempo gain in one of the critical variations. It is nice that in the solution, 3...Ke3, which was the alternative to the main move in the temptation, becomes Black's most tenacious defence, forcing White to find the counter-intuitive move 5.Kh3! The ensuing play is characterised by the black king continuously moving into close opposition to the white king, which is moving along the edge, and repeatedly threatening mate. Black cannot, however, continue this strategy indefinitely, because the white king eventually gains a tempo by attacking the rook. This pattern is fundamentally familiar, but is shown here in a refreshingly new way in conjunction with a specific arrangement of white passed pawns. White can use the king's tempo gains to advance the d-pawn. Although this pawn is ultimately lost, the forced movement of the black king allows the white king to make the decisive incursion across the seventh rank. Very instructive, albeit rather technical in nature, with no major highlights and no significant black counterplay, which, in my opinion, stands in the way of this otherwise very fine work receiving a prize."

3.1.6 Korolkov & Mitrofanov +0013.23c2f5 (1959). No cook! (VH)

Volker Hergert informed me that the study is correct. After **6... Kg5**, which is stronger than 6... Kh7 and should therefore be considered the main line, White wins with **7. Nf7+!**; on the other hand, Mario Garcia's 7. Bd4 would indeed lead to a draw.

3.1.12 Veretennikov =0046.22b8a6 (1980). Cook, dual, correction

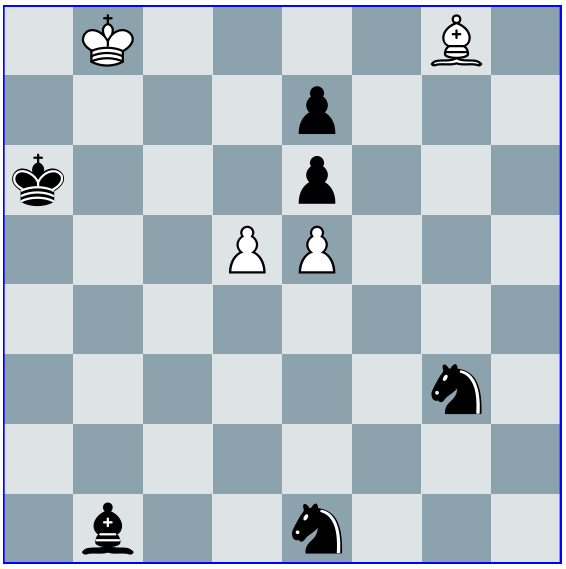

The study is seriously flawed. There is the (minor) dual **3. Kc7** and, more seriously, Black has an advantage after **1. Bb5!**. The study can be fixed by rearranging the minor pieces.
